

Experiment 1

Flight Reservation System

AIM:

To create a simple cloud-based Flight Reservation System using any Cloud Service Provider and demonstrate the Software as a Service (SaaS) model with necessary flight booking options.

Procedure

1. Select a suitable Cloud Service Provider for hosting the application.
2. Create a simple Flight Reservation System as a cloud-based application.
3. Design the application interface with the required flight booking fields.
4. Provide options for One Way and Round Trip.
5. Add fields for From and To locations.
6. Provide the Departure date and other required travel details.
7. Add options for Travelers & Class.
8. Provide different Fare Types for the booking.
9. Include options to select International or Domestic Flights.
10. Store and process the entered booking details through the cloud application.
11. Deploy the application on the selected Cloud Service Provider.
12. Access the application through the cloud to demonstrate the SaaS model.
