

Experiment 2

Property Buying and Rental System

AIM:

To create a simple cloud-based Property Buying and Rental System for Chennai City using a Cloud Service Provider and demonstrate the Software as a Service (SaaS) model.

Procedure

1. Select a suitable Cloud Service Provider and create a cloud application.
2. Create a form for managing property buying and rental details.
3. Add fields such as:
 - Property Type
 - Buy / Rent
 - Residential / Commercial
 - Area
 - Place
 - Price Range
 - Property Value
 - Rental Agreement
 - Rental Amount
 - Property Status
4. Enter the property details for properties available in Chennai.
5. Provide options to identify whether the property is available for Buy or Rent.
6. Include Commercial and other property types as required.
7. Store the entered property details in the cloud database.
8. Allow users to view and search the available properties based on the required fields.
9. Deploy the application through the selected Cloud Service Provider.
10. Access the application through the internet to demonstrate the SaaS model.

OUTPUT

RESULTS

The Chennai Property Buying and Rental System was successfully created as a cloud-based application. The system allows users to manage and view property details such as Buy/Rent, Commercial, Rental Agreement, Area, Place, Price Range, and Property Value.
