Experiment 10

Student Information System

AIM:

To create a simple cloud-based Student Information System to run and display student information using any Cloud Service Provider and demonstrate the Software as a Service (SaaS) model.

Procedure

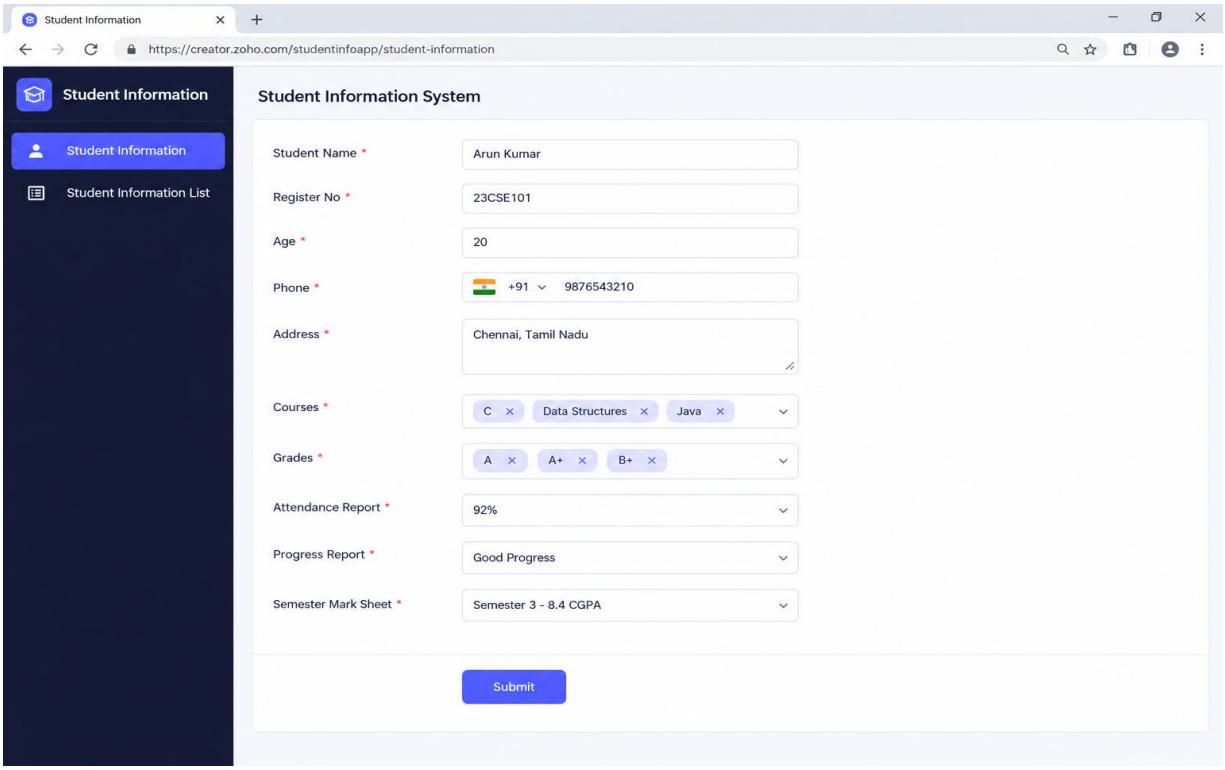

1. Select a suitable Cloud Service Provider and create a cloud application.

- Create a Student Information Form with fields such as:
- Student Name
- Registration Number
- Address
- Phone
- Age
- Courses
- Grades

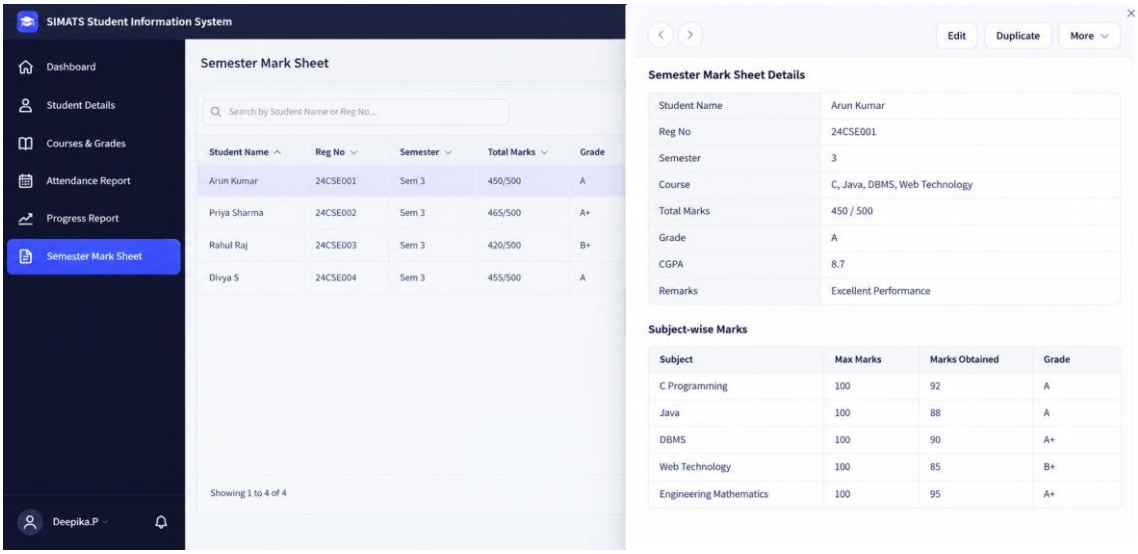

2. Create an Attendance Report form to store student attendance details.
3. Create a Progress Report form to record the student's academic progress.
4. Create a Semester Mark Sheet form to store semester-wise marks and grades.
5. Enter the required student information into the respective forms.
6. Store and manage the student records in the cloud database.
7. Provide options to view the student's information, attendance, progress, and semester marks.
8. Deploy the application using the selected Cloud Service Provider.
9. Access the application through the internet to demonstrate the SaaS model.

IMPLEMENTATION

INPUT

OUTPUT

RESULTS

The Student Information System was successfully created as a cloud-based application. The system stores and displays student details, courses, grades, attendance reports, progress reports, and semester mark sheets. The application successfully demonstrated the Software as a Service (SaaS) model using a Cloud Service Provider.
