

Experiment 4

Library reservation system

AIM:

To create a simple cloud-based Library Book Reservation System for the SIMATS Library using any Cloud Service Provider and demonstrate the Software as a Service (SaaS) model.

Procedure

1. Select a suitable Cloud Service Provider for hosting the application.
2. Create a simple Library Book Reservation System as a cloud-based application.
3. Design the application interface with the required library book details.
4. Provide fields to enter the Title of the Book and Author.
5. Add details such as Publication, Year, and Edition.
6. Enter the Number of Copies available for each book.
7. Add the Rack Number to identify the physical location of the book.
8. Provide a Status field to indicate whether the book is Taken or Returned.
9. Store and manage the entered book details through the cloud application.
10. Deploy the application on the selected Cloud Service Provider.
11. Access the application through the cloud and demonstrate the SaaS model.

OUTPUT

The screenshot displays the SIMATS Library Book Reservation System interface. On the left, a dark sidebar contains the application logo and navigation links for 'Membership Plan' and 'Registered Members'. The main content area is titled 'Registered Members' and features a table with columns for 'Customer Name' and 'Occupation'. Three members are listed: kaanishika T (Educator/Academic), monish p (Media), and Deepika P (Student). The 'Deepika P' row is selected, and its details are shown in an 'Overview' panel on the right. This panel includes fields for Customer Name, Occupation, Category, Purpose, Like to access, Phone Number, Email, and Address. Below the overview, there is a link to 'Add a comment'.

Customer Name	Occupation
kaanishika T	Educator/Academic
monish p	Media
Deepika P	Student

Overview	
Customer Name	Deepika P
Occupation	Student
Category	Individual
Purpose	In-house reading
Like to access	Research & Reference
